

SUMMARY

Self-taught developer with a proven ability to adapt in both self-starting and collaborative environments while staying focused on achieving high-quality results under strict deadlines. My desire to learn more in the tech space started with my small home lab that quickly grew into a full on-prem server and various cloud hosted services. These experiences have allowed me to expand my knowledge and apply it to a multitude of tech related roles that paved the path to my Systems Administrator career. I am eager to continue to find new solutions for any tech related problem and to never stop learning
